Detailed Response to Reviewers

To editors and reviewers

Dear editors and reviewers:

Our sincere thanks go out to the editors and reviewers who reviewed our manuscript and provided constructive comments that significantly improved it.

We have made detailed revisions in response to comments and suggestions made by editors and reviewers, and the main changes are summarized below:

- We have added extra explanations on the proposed method;
- A new experiment is conducted on the effectiveness of groups;
- The font size in all the figures has been properly adjusted;
- All grammar errors and editing issues are fixed.

Best regards,

Hongtao, Jiahao, Tianyi

Dear all:

Thanks again for reviewing and processing our manuscript, particularly for your constructive comments and valuable suggestions. Following these comments and suggestions, we have revised the manuscript. The following is a point-by-point response to editors and reviewers, in which we first quote the comments and then reply how we have revised the manuscript to accommodate the changes. We use black sans serif font for our responses and blue for comments to facilitate cross-referencing. The revised manuscript highlights the revision with yellow shading.

Best regards,
Hongtao, Jiahao, Tianyi

Ms. Ref. No.: XXX

Title: 111

Expert Systems With Applications

Dear Dr. Li,

As Editor-in-Chief, ...

1. All the required sections are included.
2. Our paper completely complies with all the ESWA compliance requirements:
    - Authorship policies: the author and authorship information completely comply with all the requirements.
    - Guidelines of reference style and reference list: citations in the text follow the referencing style used by the American Psychological Association.
    - Highlights guidelines: all the highlights completely comply with the characters number and contents requirements.
3. All the comments by Reviewer #2 are considered, including some symbols and descriptions.

Best regards,

XXX Li

2 To Associate Editor

a) Associate Editor's Comments

1. Reviewer 2 is happy with the replies to his/her comments in the second round of review. However, he/she still has a few minor points for the authors to address. Authors are invited to revise paper providing point-to-point responses according to the comments raised

by the reviewer. When revising the submission please highlight the changes you make in the manuscript by using colored text.

2. Prior to the next review process, you need to completely comply with

1) ESWA authorship policies,

2) ESWA guidelines of reference style and reference list, and

3) highlight guidelines.

3. Prior to the next review process, your submission needs to include each of the "Required Sections." The Required Sections must be placed in the order listed: Section #1 – a, Section #1-b, Section #2-a, Section #2-b, Section #3-a, and Section #3-b.

Note that Section #1- a MUST contain the COMPLETE text covered in this email letter from Editor-in-Chief.

b) Response to Associate Editor

Dear associate editor:

Thank you for your valuable comments. We have revised the paper and provide point-to-point response to the comments raised by the reviewers in the following according to your requirements.

1. All the comments by Reviewer #2 are fixed, including the descriptions and references.
2. We have completely complied with 1) ESWA authorship policies, 2) ESWA guidelines of reference style and reference list, and 3) highlight guidelines:
    - Authorship policies: the author and authorship information completely comply with all the requirements.
    - Guidelines of reference style and reference list: citations in the text follow the referencing style used by the American Psychological Association.
    - Highlights guidelines: all the highlights completely comply with the characters number and contents requirements.
3. All the required sections are included.

3 Response to Reviewers

a) Reviewers' Comments

Reviewer #2:

Thank you for responding to my comments, however, I do not see the changes in the document related to your responses. For instance:

*) P4: The authors say 'In the same year, another OVR TSVM (Angulo et al, 2003) was designed to solve the multi-classification ..' However, in the response letter, they say 'Indeed, Angulo et al. (2003) have adopted the idea of OVR strategy for SVM. Thus, we have replaced it with (Cong et al., 2008) that the idea of OVR has been introduced into TSVM.'

*) P23, line 437: add reference related to OVO TSVM. In the response letter, they say 'According to Sect. 3.2.1 in (Ding et al., 2019), this work implements OVO TSVM for multi-class classification by combining TSVM and OVO strategy'

b) Response to Reviewers

Dear Reviewer #2:

Again, we would like to express our gratitude to you for your time and effort in reviewing and processing our manuscript and especially providing constructive comments and valuable suggestions for significantly improving the manuscript. Following these comments and suggestions, we have made changes in the revised manuscript. A point-by-point reply to the reviewer's comments is given below, where in each case we quote the referee's comments and then explain how we have revised the paper to accommodate the revisions requested. For easy cross-referencing, the comments are marked in blue while we use the black sans serif font for our responses. Meanwhile, the contents in the revised paper are highlighted by yellow shading.

To Reviewer 1

Thank you for responding to my comments, however, I do not see the changes in the document related to your responses.

Reply: Again, we wish to thank and admire you for their thorough and rigorous reviews. We have revised and reviewed the manuscript based on your thoughtful comments.

Reviewer Point P 1.1 — P4: The authors say 'In the same year, another OVR TSVM (Angulo et al, 2003) was designed to solve the multi-classification ..' However, in the response letter, they say 'Indeed, Angulo et al. (2003) have adopted the idea of OVR strategy for SVM. Thus, we have replaced it with (Cong et al., 2008) that the idea of OVR has been introduced into TSVM.'

Reply: Thanks for this careful comment, we apologize for not updating here. The updated ones are as follows:

Revision P 1.1

In 2008, Moradan et al. (2021) combined the OVR strategy with TSVM to achieve efficient speaker recognition.
